

Textielbedrukking

Uiteraard kijken wij eerst uw bestanden goed na voordat we het in productie nemen. De persoonlijke service die u van ons gewend bent.

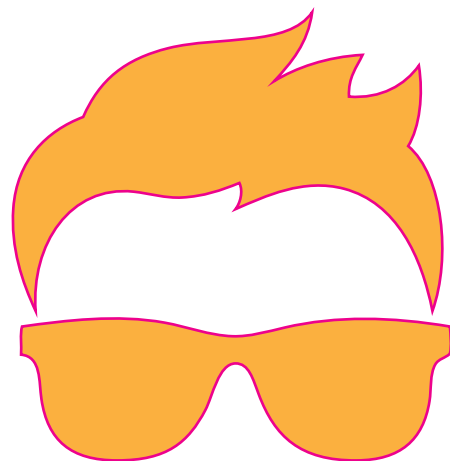

Algemene aanleverspecificaties

- Zet tekst in je ontwerp altijd om naar contouren/outlines
- Transfer is een A4 of A3 formaat.
- Gebruik een lettergrootte van minimaal 9 punten.
- Maak je bestand op in de keuze die je hebt gemaakt: Textielfolie is een kleur, transfer kan in zwart wit / full colour
- Bij transfers op zwarte shirts wordt er gedrukt met een witte achtergrond
- Maak je bestand op in het formaat van de gekozen optie.
- Maak een CutContour van 100% magenta rondom het ontwerp. Op deze lijn zal de textielfolie uitgesneden worden.

Textile print

We will always check your files before starting production. The personal service you've come to expect.

General design specifications

- Prepare your design accordingly for the print of your choice:

Flex vinyl : Design cut out of 1 colour vinyl. Provide a file with only a CutContour of your design.

Powerflex vinyl : Design printed in Full colour. Provide a file including CutContour of your design.

Textile transfer :

For white shirts: Design can be printed in full colour, CutContour is not needed.

For colour/black shirts: Design can be printed in full colour with white background. CutContour is possible, not required.

-Make sure all the text in your document has been converted to outlines.

-Design your file with a bleed of at least 3mm. Allow your background to extend beyond the edge of your design, into the bleed. This is to avoid any white borders to show up after trimming and to make sure your background flows nicely to the edges

-When using images in your file, we recommend a resolution of 300 DPI. As this isn't always possible we adhere to a minimum resolution requirement of 150 DPI. We advise you to not use files with a lower resolution as the print result will suffer for it.

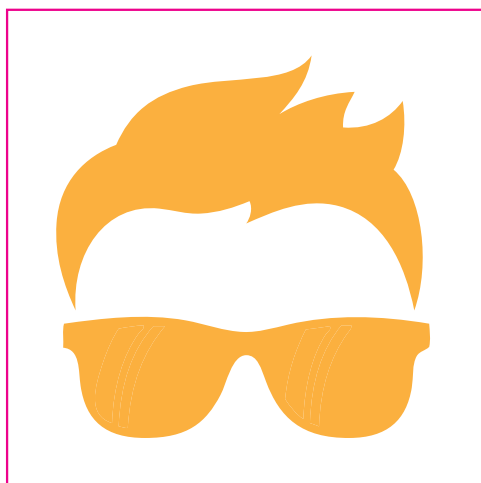

-Minimum font size that we recommend is 9pt. Readability is highly dependent on the font that you choose.

- When the print contains only text that needs to be cut individually, the minimum fontsize we require is 20pt.

-Make sure to use the CMYK colourprofile when setting up your document.

- In your design file set up a Spot colour of 100% magenta and name it 'Cutcontour' to indicate the location of your design outline. Allow for a 3mm bleed where needed.

CutContour for white or transparent backgrounds

CutContour with a bleed of 3mm
